

PsychConsult[®] Provider ePrescribing

Based on Allscripts™ award-winning technology, ePrescribe enables physicians to improve consumer care by ensuring the safety of every prescription written. Fully integrated with PsychConsult, Allscripts ePrescribe is an easy-to-use, secure web-based software solution that is accessible on computers, handheld devices, and cell phones. ePrescribe is Surescripts Certified and a qualified solution for MIPPA electronic prescribing incentives.

- ▶ Access information and prescribe from anywhere, anytime.
- ▶ Transmit prescriptions electronically, including Schedule II-V controlled substance medications.
- ▶ Improve consumer safety with automatic checks for drug interaction, dosage, adverse reaction, and duplicate therapies.
- ▶ View information on lower-cost alternatives.
- ▶ Display formulary status on medications.
- ▶ Access a complete drug reference library with one click.
- ▶ View information on formulary or tiered formulary medications, consumer eligibility, and authorization requirements received electronically from the consumer's drug plan.

The screenshot displays the Askesis ePrescribing interface. At the top, patient information for Stephanie Carter is shown, including her gender (F), date of birth (10/17/1954), and patient ID (00000205). The interface includes a navigation bar with tabs for Patients, Tasks, Library, Reports, Settings, and My eRx. A 'Script Pad' section contains a table of active medications. The first medication is Lisinopril-Hydrochlorothiazide 10-12.5 MG Tablet, and the second is BuPROPion HCl ER (XL) 150 MG Tablet. A dropdown menu is open for the second medication, showing options: Send to Pharmacy, Print, Send to ePA Task List, Send to Assistant, and Patient Reported. On the right side, there is a 'Review Script Pad' section with a help icon and a brief description of the review process.

| Rx Date | Medication & Sig | Destination | Actions |
